DETAILED ACTION

Respond to Amendment

1. This office is in response to amendment file on 3/18/05.
 - Claim 29 is newly added.
 - Claims 1-29 are pending in the application.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-2, 29 are rejected under 35 U.S.C. 102(e) as being anticipated by Tedrow et al. (6,772,273).

Regarding to claims 1-2, Tedrow et al. discloses a flash memory comprising: a local row decoder (220, 290) configured to drive word lines (221) coupled to a bank (210) of a flash memory responsive to separate read and write control signals (291, 192, 294) provide thereto from outside the local row decoder circuit, wherein the flash memory support read-while-write capability, wherein the read operation in a first bank of the flash memory can be carried out simultaneous with a write operation in a second bank of the flash memory. *See Figs. 2-4; Cols. 2-4.*

With regard to claim 29, Tedrow et al. disclose a flash memory comprising: first and second banks of flash memory (210), wherein the flash memory support read-while-write capability, wherein a read operation in the first bank of the flash memory can be carried out simultaneous with a write operation in the second bank of the flash memory. *See Figs. 2-4; Cols. 2-4.*

Allowable Subject Matter

3. Claims 3-15 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: The prior art of record fails to teach the flash memory as noted above and further comprising a global row decoder circuit, among others as claimed in claim 3, coupled to the local row decoder circuit via the separated read and write control signals.

4. The following is an examiner's statement of reasons for allowance: Claims 16-28 are allowable over the prior art of record because none of the prior art whether taken singularly or in combination, especially when these limitations are considered within the specific combination claimed, to teach: a flash memory device comprising: local row decoders circuit, among others as claimed in independent claim 16, in respond to a separate write and read control signals from global row decoder circuits, to enable read operation in a first sector in one of a plurality of

Art Unit: 2827

banks and enables a write operation in a second in another of the plurality of the of banks simultaneous with the read operation.
